

TENDO-E - The Economic Toolholder from SCHUNK

The high-precision TENDO-E hydraulic expansion toolholder meets the highest demands of quality in metal-cutting. It provides the perfect combination of performance and value, along with excellent run-out accuracy (<0.005 mm/ 0.0002") and vibration dampening. This results in longer tool life, high workpiece quality, and minimum stress on the machine spindle, all at an everyday low price!

With TENDO-E, the cutting tool can be changed in seconds without peripheral equipment and quick tool-presetting is possible with the axial length-setting screw. Intermediate sleeves add flexibility and all common tool shanks can be clamped.

Available for CAT 40/50, SK 40/50, JIS-BT 40/50, HSK-A 63

About SCHUNK:

SCHUNK is a family owned operation and a global player in one. Totaling more than 60 years of experience, SCHUNK is a leading worldwide manufacturer of toolholding components, workholding systems, and automation components. With their reputation for high quality products, absolute precision, and continuous innovation, SCHUNK is a reliable partner for their customers. For more information, visit www.schunk.com
