

New! Sandvik Coromant Machining Calculator App

The new Machining Calculator App from Sandvik Coromant is designed to help engineers and machinists optimize the performance of their turning, milling and drilling applications by calculating optimal cut settings based on job parameters.

Each easy to use calculator features a help button if you need more information about the calculation being executed or the input parameters required to generate your results.

The Machining Calculator helps highlight how small changes in the way you use your tools can make a big impact in the results you get from your machines and tooling.
